12. EXTERNAL CONTROL INTERFACE DEFINITION	37

1. Keyboard Selection Key Start/Stop Key Return Key Numeric Key Return Key

Pure digital input

Integer input: Press the number keys directly to input. Decimal input: Input using fixed-point decimal method.

Example: To enter 1.23, press the buttons one by one $\frac{1}{ABC}$, $\frac{2}{DEF}$, $\frac{3}{GHI}$, the input is completed.

Press Back key to delete characters.

• Mixed input of numbers and letters

To enter a mixed string of numbers and letters, press the corresponding number key first, then press \land \lor to scroll through the selectable characters.

Press Back key to delete characters.

Example: To enter the string "Ad8", use the following steps:

- 1 Press $\frac{1}{ABC}$ key, then press V key 4 times to select 'A';
- Press ²/_{DEF} key, then press V key once to select 'd';
- 3 Press $\frac{8}{WX}$ key, to complete string input

2. First Startup

• First time startup prompt

When you start the system for the first time (the first time you turn it on after leaving the factory or the first time you start it after restoring the factory settings), after the startup screen ends, a prompt will appear showing that you need to make necessary settings for the first time startup. Press **Enter** key to continue.

Language selection

Press \land V keys to select the system language, press term key to confirm and go to the next step; the system language can also be changed in the system settings.

语言 Language		
使用上下选择健选择,获[Enter]健确认 Use the up and down selection keys to select, and press [Enter] to confirm		
	简体中文	\bigcirc

Setting up pump manager

Enter the pump administrator's account, the default name is Admin. The pump administrator has the highest authority and can add users under user management.

Press Back key to delete characters.

Press \bigwedge V keys to scroll through the selectable characters.

After entering, press key to save and proceed to the password entry screen.

Setting the Pump Administrator Password

Use the numeric keypad to enter a 4-digit password.

Press Back key to delete characters.

After entering, press **Enter** key to confirm, and you will be prompted to enter the administrator password again.

If requested, enter your PIN again.

Press Back key to delete characters.

After entering, press Enter key to confirm.

If the two passwords you entered do not match, the following screen will be displayed.

Press Enter key to return to the first password entry screen

Create your first recipe

When the system is turned on for the first time or restored to factory settings, there is no recipe in the storage, and you need to create the first recipe. If you need to add or modify recipes later, you can do so in recipe management.

The new recipe is created using a wizard-style operation. Users only need to enter or select the necessary information Press the prompts, and the system will automatically generate the recipe. Users only need to fine-tune individual parameters when using it.

• Enter the recipe name

Press Back key to delete characters.

Press \bigwedge Vkeys to scroll through the selectable characters.

After entering, press key to save and enter the work mode selection screen.

Flow setting

Continuous delivery mode, set flow rate, unit: mL/min.

Use the numeric keypad to enter

Press	Back	key to delete characters
Press	RTN	key to return to working mode selection
Press	<u>Enter</u>	key to enter tube selection interface

Tube selection

Select the tube according to the actual tube number used.

Press \land \lor keys to select tube type.

Press **RN** key to return to the loading volume setting or flow rate setting interface.

Press Enter key to complete the setting

At this point, the first recipe is created, and the system will automatically calculate the pump's operating speed, operating angle and other

parameters. Other parameters take the default values.

There are more recipe settings in recipe management, including creating new recipes, deleting recipes, editing recipes and other operations.

• Complete the setup

The first start-up settings are complete. Press **Enter** key to enter the working interface.

3. Login

If this is not the first time you start the pump, and the control mode is set to "Local", the peristaltic pump will display the initialization screen and the login screen in sequence.

• User login

Press \land V keys to select a username.

Press Enter to enter the password input interface.

Enter a 4-digit password using the numeric keypad.

Press Back key to delete characters.

Press **RIN** to return to the username selection interface.

After entering, press Enter key to confirm.

If the password is correct, you will enter the work interface; if the password is incorrect, the following interface will be displayed

Press Enter key to return to the password input interface.

4. Working Interface

Interface layout

"Continuous delivery" working interface:

Icon Description

Currently logged in user name

The name of the recipe currently being called

Clock

Enter key to enter corresponding function interface

In continuous delivery mode, press 🔊 once, the pump runs, press it again to stop the pump

When the pump stops, press and hold 🗾 key to empty

• Speed fine-tuning

In the "Continuous Delivery" working interface, when the pump is paused, press \land \lor keys, select the speed, as shown below, the speed is displayed in red

Press Enter key to enter the speed fine-tuning mode, and the speed value will flash.

Press Enter key to exit speed fine-tuning mode

5. Recipe Management

• Enter the recipe management interface

In standby mode, press \land \lor keys, select the recipe management icon, as shown below

Press Enter key to enter the recipe management interface.

配方管理		
使用上下选择键选择需要的操作		
按[Enter]键确认		
▶ 副队和子		
∟ 新建配方		
□ 编辑当前配方		

Press \land \lor keys to select operation, the selected item will be displayed with \checkmark icon in front, press \bowtie key to enter the corresponding operation interface.

Deleting a recipe

In the recipe management interface, press \land \lor to select the "Delete"

Recipe" option

使用上下选择键选择需要的操作		
按[Enter]键确认		
☑ 删除配方		
□ 新建配方		
□ 编辑当前配方		

Press Enter key to enter the recipe list

配方列表		
4444		
6666		

Press \land \lor to select the recipe to be deleted.

Press Enter to delete the selected recipe.

New Recipe

In the recipe management interface, press \land \lor to select the "New Recipe" option.

Press Enter to enter the New Recipe Wizard.

配方名	
请输入配方名 使用键盘输入,按[Enter]键确认	
1	

Enter the recipe name and press **Enter** key to save and enter working mode selection.

Press \land \lor keys to select working mode.

Press Enter key to enter the flowrate setting interface.

Working mode "Continuous delivery" mode, set flow rate, unit: mL/min.

Use the numeric keypad to enter.

- Press Back key to delete characters.
- Press RTN key to return to working mode selection.
- Press Enter key to enter tube selection interface.

Select the tube according to the actual tube number used.

软管选择			
1	史用上下选择键选择	,按[Enter] 健利	商认
	73#		

Press \land \lor keys to select tube type.

Press **RN** key to return to the loading volume setting or flow rate setting interface.

Press Enter key to complete the setting.

At this point, the new recipe is complete, and the system will automatically calculate the pump speed and other parameters. Other

parameters take the default values.

After the new recipe is created, the system will load the new recipe into the working recipe and enter the working interface.

• Edit current recipe

In the recipe management interface, press \land \lor to select the "Edit current recipe" option.

	配方管理	
使用上下选择键选择需要的操作		
	按[Enter]键确认	
└」 删除配方		
□ 新建配方		
☑ 编辑当前酉	记方	

Press **RN** key to cancel the selection and return to the working interface.

Press Enter key to enter the recipe editing interface.

配方	〕 编辑
配方名	6666
工作模式	定量分装
软管尺寸	73#
灌装量	588 mL
转速	239 rpm

Press \land \lor keys to select the edit item.

Press **RN** key to return to the recipe management interface.

Press Enter key to pop up an input box or selection box

The complete editing items are shown in the following table:

Edit item	Description
Recipe name	Not editable
Working mode	Selected when creating a new recipe, cannot be edited
Tube size	Selected when creating a new recipe, cannot be edited
Flow rate	Unit: ml/min, volume of liquid pumped per minute, valid in "continuous delivery" mode
Speed	Pump speed during running
Acceleration	The speed of the motor when accelerating, can be set
curve	as 1-5
Deceleration	The speed of the motor when it decelerating, can be
curve	set as 1-5
Back-suction speed	Motor rotation speed during back-suction

6. Flow Rate Calibration

In the "Continuous Delivery" working interface, press \land \lor keys to select \checkmark icon.

Press **RN** key to cancel the selection and return to the working interface.

Press Enter key to enter the flow calibration interface.

Use the numeric keypad to enter the calibration time. After entering, press Enter key to enter the next step.

Make sure the tube is full of liquid, press and hold \triangleright key to start loading, release it to stop.

Press Enter key to start the calibration run, the pump starts, and the countdown begins.

Wait for the countdown to end and enter the actual pumping volume input interface.

Enter the actual measured volume of liquid.

Press Enter key to complete the calibration, the system automatically calculates the actual running speed and saves it to the recipe.

7. System Settings

Press **RN** key to cancel the selection and return to the working interface.

Press Enter key to enter the system settings interface.

- Press \land \lor keys to select a setting item.
- Press RN key to return to the working interface.
- Press Enter key to pop up an input box or selection box

|--|

Setting items	Description
Running direction	Set the direction of pump operation (CW, CCW)
External control start and stop mode	Pulse: The running state of the pump changes once at each falling edge of the external control start/stop signal. Level: The pump runs when the external control signal is at a low level, otherwise the pump stops
Analog quantity	Analog type: 4-20 mA, 0-5V, 0-10V If analog quantity is enabled, the communication function will be automatically disabled.
Analog minimum speed	The speed value corresponding to the minimum analog value input, unit: rpm
Analog maximum speed	The speed value corresponding to the maximum value of the input analog value, unit: rpm
Communication enable	Optional RS485, RS232 or communication function disabled If the communication function is enabled, the analog quantity will be automatically closed.
Baud rate	Select the baud rate used for communication: 9600, 19200, 38400

Use the numeric keyboard to input the speed corresponding to the maximum analog value. Press Press Enter key to save and return to the system settings interface.

Wiring instructions

Press the selected analog type, refer to the figure below to select the appropriate wiring method.

11. RS485 Communication Control

RS485 communication using MODBUS RTU Protocol. Data format: 8, N, 1; Baud rate: 9600, 19200, 38400. To use RS485 communication control, first enable the communication function in the system settings, and set the baud rate and local address.

Enable RS485 communication control

The RS485 communication control is disabled by default when the system leaves the factory. This function can be enabled by the following operation. After the communication function is enabled, the system will directly enter the remote-control mode each time it is turned on, without logging in. The operating parameters and operating status of the pump are completely determined by communication control.

Press \bowtie key to enter the system settings interface. Press \bigwedge \bigvee to select the "Communication Enable" setting item.
